

A quantum field theory for the atoms of space

Daniele Oriti*

Max Planck Institute for Gravitational Physics (Albert Einstein Institute)

E-mail: daniele.oriti@aei.mpg.de

We give a brief introduction to the group field theory (GFT) formalism for quantum gravity, a 2nd quantised reformulation of loop quantum gravity and spin foam models and a group-theoretic enrichment of the purely combinatorial tensor models. We then review some recent key developments concerning: the definition and analysis of 4d gravity models, progress in GFT renormalisation, and the extraction of effective cosmological dynamics from GFT condensates.
