DISCRETE 20-21 PROCEEDINGS : MAVROMATOS

RESPONSE TO THE REFEREE

I thank the referee for the positive judgment on my article. I am very happy to cite the work suggested by the referee, whom I thank for asking me to do so, as indeed was an omission on my part and now my article is complete. I cited the work in several places in the revised text, but also devoted an explicit footnote on it, comparing it with the stringy approach, as far as the positive coefficient of H^2 terms in quantum field theoretic derivations of the RVM is concerned. However, I have been brief in this discussion, due to space constraints of the proceedings article. I hope my contribution will now be accepted or publication in the PoS.
